

L1 / L2 / L3 Edit & Report Visibility Configuration (Reference: Points #13 & #14)

Objective:

This configuration ensures that L1 / L2 / L3 Edit and Report Visibility flags behave globally, independent of form versions against Job Type. These controls apply uniformly across all versions of a form.

Configuration Screen:

L1 / L2 / L3 Edit & Report Visibility will be configured within the existing Form Configuration screen. No separate module or screen will be introduced.

Navigation:

Login → Job Management → Configurations → List → Manage

Implementation Details:

Updates to the following columns will not create or update a form version and will always work based on the latest saved state:

- L1 Edit
- L2 Edit
- L3 Edit
- Is Report Visible

Toggle-based saving:

Each toggle change triggers an immediate save event. No Save or Update button is required for these fields/columns.

User Guidance:

A system note will be displayed:

“Changes to L1/L2/L3 Edit or Is Report Visible will not update the form version.”

Independent from Form State:

These columns operate independently of ‘Active on Form’ flags. Users’ can modify these settings even if the field is inactive on the form.

Real-time effect:

All changes (i.e. Toggle switch) take effect immediately and system wide.

Toggle Behaviour:

- When Toggle is OFF
 - L1 / L2 / L3 Edit: - The field is not editable at the respective approval level.
 - Is Report Visible: - The field does not appear in reports.
- When Toggle is ON
 - L1 / L2 / L3 Edit: - The field is editable at the respective approval level.
 - Is Report Visible: - The field appears in reports.

Impact on Modules (WFM Portal)

1. Impact of Is Report Visible Column

The following reports will dynamically include or exclude fields based on this toggle:

- Consumer Installation – CI & MI Report
- Consumer Installation Report
- Consumer Survey – CI & MI Report
- Consumer Survey Report
- DTR Survey Report
- DT Installation Report
- Feeder Installation Report
- Feeder Survey Report

- QC Analysis – CI & MI Report
- QC Analysis – CI Report

2. Impact of L1 /L2 /L3 Edit Columns

Job Approval Screen:

Edit permissions at L1, L2, and L3 approval levels reflect these configurations in real time.
